The Minimax M2 Water Softener

Compact, powerful and efficient water softening for your home

Hard water damages your home

What causes hard water?

Rainwater is naturally completely soft. It only absorbs minerals such as calcium and magnesium when it hits the ground, which then causes limescale when the water is heated up.

What damage does limescale cause?

Deposits of minerals (scale) in heater elements in your kettle, dishwasher and washing machine can result in expensive faults and an overall shorter life span of the appliance. The same deposits are found in your water pipes and hot water cylinder, which will increase your heating costs considerably.

Just ¼" (6mm) of scale will increase your water heating costs by 55%.

The effects of hard water are very real for homeowners - it damages heating systems, appliances and leaves unsightly marks everywhere it touches.

The Minimax M2 is designed to solve all your hard water problems.

What are the benefits of softened water?

Softened water from Minimax offers exceptional benefits to you and your home, from sparkling sinks and taps to spotlessly clean bathrooms and kitchens.

Once you have a Minimax installed you will wonder how you lived without it!

Cost savings

Softened water has a wide range of practical and financial benefits. It's often considered an essential money saving endeavour especially in hotels, laundrettes, cafes, restaurants and schools.

Hard water can also be a contributing factor to skin conditions such as eczema, psoriasis and very dry skin.

The Minimax M2 is revolutionary in design, compact enough to fit under your kitchen sink, it works by removing minerals which exist in hard water. Leaving you with pure, softened water which is better for you, your health and your home.

The benefits of a water softener

How does a water softener work?

Under a microscope, the minerals in hard water look similar to a snowflake with sharp irregular features. These minerals are filtered out through a water softener as they become trapped in the resin. In exchange for the minerals, your home is provided with beautifully softened water.

What makes the M2 special?

The Minimax M2 is the latest generation in water softening design. It's market leading advanced twin cylinder technology means you have luxury softened water 24 hours a day, 7 days a week.

It also features the highest flow rates and runs on block salt which conveniently take up half the space of tablet salt.

MADE IN BRITAIN

10 YEAR GUARANTEE

High flow rates

Most modern homes are fitted with direct mains pressure plumbing systems and power showers. The M2 has been designed with this in mind and the latest model has increased the continous flow rate capabilities to over 55 litres per minute, making it a leader in its field.

The Minimax M2 water softener

The ultimate Block Salt softener

Strong robust cabinet design

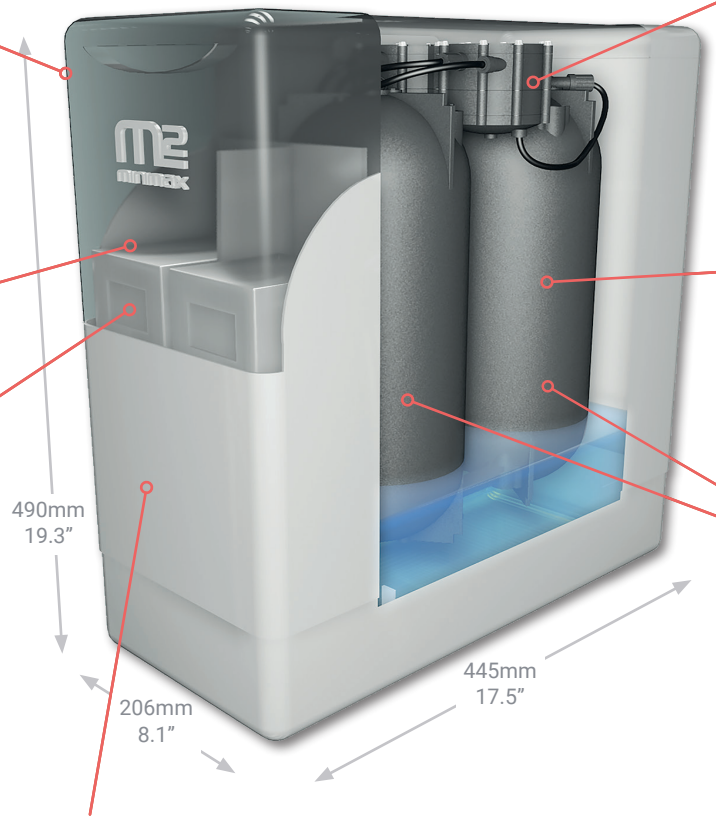
The British designed, manufactured and hand built softener has been carefully engineered to cope with the intricacies of all British plumbing systems, from tanks in the loft to combination boilers and high flow unvented hot water cylinders. The Minimax M2 offers high flow rates with extremely good salt and water efficiency that suits all homes.

Clear lid for easy salt monitoring

Easy to handle Block Salt

A solution that takes the hassle out of refilling your softener, unlike traditional tablet salt which comes in heavy 25kg sacks, block salt comes in lightweight 4kg bricks.

Filling your softener is simple. Two blocks of salt are required - an average hard water home will use less than a block of salt per person, per month.

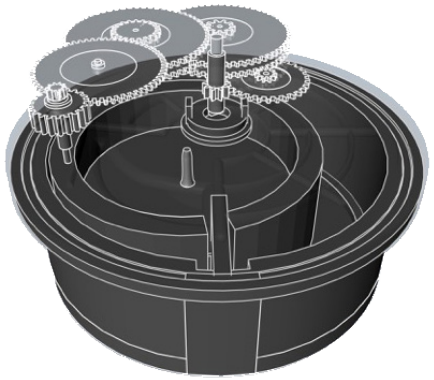


Non-electric, great efficiency, low running cost

The power of water flow cuts out the need for electricity. With no timers, motors, adjustments or complicated programming, the Minimax M2 makes water softening simple.

Accurate metering for maximum flow rates

Displacement meters allow the Minimax to regenerate with absolute accuracy, giving it a huge advantage over paddle wheel meter designs. Perfect for tank fed indirect and direct plumbing systems, such as combination boilers and unvented cylinders. Your Minimax M2 is powerful enough to last and you can take it with you if you move home.



Great British engineering

MADE IN BRITAIN

Twin cylinder for 24 hour softened water

The twin cylinder design of the Minimax allows for softened water 24 hours a day and more than enough capacity to supply softened water for a large family.

A single cylinder softener has to regenerate at night which wastes capacity, salt and water, as well as not constantly providing the home with softened water. This creates soft water that never feels quite soft enough.

Soft water all day everyday

minimax

Our water softeners are sold through a network of professional, independent and carefully selected local water treatment businesses. This means your Minimax dealer is expertly placed to give you the best advice for your home and your needs.
